PULY MILK[®] Plus Liquid

CLEANER FOR AUTOMATIC CAPPUCCINO MAKERS AND MILK AND COFFEE RESIDUES

...more than just cleaning!

FEATURES: **PULY MILK Plus Liquid** is the result of constant product developments, specifically designed in our Special Applications Research Centre to service the automatic CAPPUCCINO MAKER every day and for removing milk and coffee residues from steam wand and milk-jugs. What's more, **PULY MILK Plus Liquid** provides “**more than just cleanliness**”. It improves deodorizing and keeps the CAPPUCCINO MAKER running smoothly, removing any organic residues that may cause malfunctioning, or give rise to mould or bad smells (**Tested and Certified by N.S.F. International - Protocol P152 Health Effects and Corrosivity of Commercial Espresso Machine Chemical Cleaner**).

DIRECTIONS FOR USE: to clean the automatic cappuccino maker **DAILY:** a) dilute 25 ml of **PULY MILK Plus Liquid** in half litre of cold water; b) get the solution absorbed by means of the suction tube by repeatedly pressing the button indicated in the machine instructions; c) rinse by getting at least 2 litres of clean water sucked in. It is absolutely impossible to get the cappuccino maker to suck in hot water so only use cold water.

To clean the whole machine WEEKLY: prepare a solution of 25 ml of **PULY MILK Plus Liquid** for every half litre of very hot water, using plastic, stainless steel or glass (but not aluminium) containers; dismantle the cappuccino maker completely and leave the parts to soak for 2-3 hours (or overnight) and then rinse carefully once with clean water and repeat. The solution must be used to clean the steam wand, the milk-jug and all the tools dirty of milk and coffee residues.

FREQUENCY OF USE: **PULY MILK Plus Liquid** is generally used every 50/100 cups of foamed milk and whenever you need to restore the machine to efficient working order. We anyway advise preventive measures **at least once a day**, to prevent the heated milk from drying and forming a hard crust that is difficult to remove quickly.

SELF CHECK: Inspect the result. Check that it smells right. If necessary, repeat the washing operation.

CRITICAL POINTS: Check that the seals are whole, and if necessary replace with new spare parts. Check that the dripping pan drain is not clogged so that the **PULY MILK Plus Liquid** reaction foam can flow out freely.

DATA AND SAFETY: See the **SAFETY SHEET**. During washing, be careful of splashes of boiling water; use protective garments (gloves etc.).

PACKAGES:

Puly Milk Plus[®] Liquid 1 L bottle
automatic dispenser
12 bottle per case

Puly Milk Plus[®] Liquid 100 ml bottle
24 bottle per case
